Timothy Keaveny

Software Engineer

I'm a Software Engineer and Cybersecurity enthusiast who got his start in programming via a Raspberry Pi and a 2016 immersive pilot program for wounded veterans, hosted by Ft. Belvoir WTB and Amazon Web Services at their Herndon, VA HQ office.

In addition to this, I have also attended two immersive bootcamps, one for Full Stack Web Development at General Assembly (14 weeks at 8 hrs a day 5x weekly) and another for Penetration Testing at Hacker USA (6 months at 5 hrs a day 2x weekly).

I attended & completed both bootcamps simultaneously while working full-time at the New York Division of Military & Naval Affairs, 120 miles away. I only mention this to demonstrate my commitment and passion.

Organized, mission-focused, and detail-oriented is how I would describe myself, owing to 10 years of military service in financial management and network operations.

I have thorough experience with technologies such as Python, vanilla JavaScript, Node.js, React, Linux, Bash scripting, AWS cloud platform, Serverless architecture, and much more than I can fit within this description.
